

Synopsis

Car Rental System

PROJECT:

Car Rental System is software program for cab operators to manage day to day operations. The main problem they are facing is booking the cab when customer is called. There is a lot of mismatch in the address or in handling or in billing. To solve this problem this project is developed. This project has options to store all the details of cabs, drivers and customers. So when customer calls they will feed the data in computer, so easily we can allocate particular cab particular customer. And based on this we can do the billing.

OBJECTIVE:

The major objective of this project is to computerize the cab operations. The other major objective is to manage all booking through computers so there will not be any mismatch across the shifts. The other major objective is to make the proper billing for the customer.

Hardware and Software requirement

Hardware Requirement

Processor	:	Intel Core Duo 2.0 GHz or more
RAM	:	1 GB or More
